Q1) Prepare a class diagram for the following object diagram that shows a portion of Europe.

Ans:

Q2) Prepare a class diagram for object diagram given in Figure -2. Explain your multiplicity decisions.

What is the smallest number of points required to construct a polygon? Does it make a difference whether or not point may be shared between polygons? Your answer should address the fact that points are ordered.

Ans : A polygon is defined by at least three points, as two points only establish a line. Therefore, a polygon must consist of three or more points.

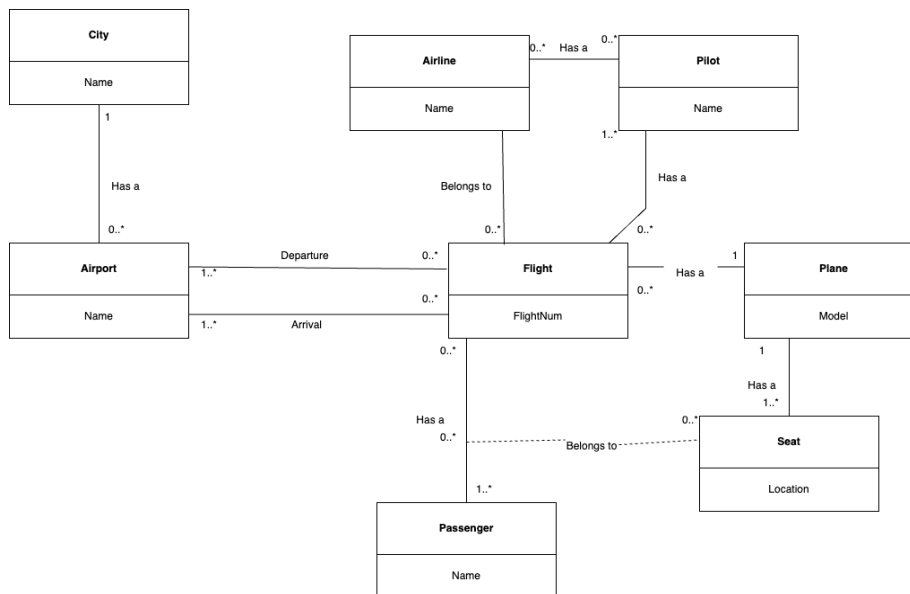

Polygons can share points, which means that a point with specific coordinates (like  $x=10$ ,  $y=10$ ) can be part of more than one polygon. This occurs when polygons share vertices or edges.

Additionally, the sequence in which points are connected plays a critical role in determining the polygon's shape. For instance, changing the order in which the same points are joined can result in entirely different shapes or polygons. Thus, the sequence of connecting points is an essential factor when constructing a polygon.

Q3)Figure 3 is a partially completed class diagram of an air transportation system. Add multiplicities in the diagram. Also add association names to unlevelled associations.

Ans:

Q4)We want to model a system for management of flights and pilots. An airline operates flights. Each airline has an ID. Each flight has an ID a departure airport and an arrival airport: an airport as a unique identifier. Each flight has a pilot and a co-pilot, and it uses an aircraft of a certain type; a flight has also a departure time and an arrival time. An airline owns a set of aircrafts of different types. An aircraft can be in a working state or it can be under repair. In a particular moment an aircraft can be landed

or airborne. A company has a set of pilots: each pilot has an experience level: 1 is minimum, 3 is maximum. A type of aeroplane may need a particular number of pilots, with a different role (e.g.: captain, co-pilot, navigator): there must be at least one captain and one co-pilot, and a captain must have a level 3.

Ans :
